Kevin Shannon

CSE310

<div align="center">Milestone 1 Project State</div>

My Project is incomplete. While most of the logic is present I had some issues getting it done in time, so I could not work out the kinks in making a working Makefile or ironing out semantic errors. The file structure is non-ideal and will most likely be changed in the final project. One issue I had was tring to find a good way for a generic sorting algorithm to sort based on a variable member variable, I hope to find a better solution in the future.
